Publication 1008 (12-77)

Publication 1008 (12-77)

Statistics of Income publications are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402

Stock No. 048-004-01492-1

In this supplemental report to the Statistics of Income series, income and tax data from individual income tax returns are shown for local areas. Number of returns, number of exemptions, and amounts of income and tax, classified by size of adjusted gross income, are presented for States, counties, and selected standard metropolitan statistical areas.

Thomas M. Durkin Chief, Operations Branch This report was prepared in the Statistics of Income Branch under the direction of Jack Blacksin, Chief, Individual Income Statistics Section.

The statistics in this report are based on the IRS Master File of individual income tax returns for tax year 1974. Return records were extracted from the Master File at the IRS National Computer Center in Martinsburg, West Virginia. Further computer processing and table production were performed at the IRS Data Center in Detroit, Michigan.

COMMISSIONER OF INTERNAL REVENUE

Washington, DC 20224

November 10, 1977

The Honorable W. Michael Blumenthal Secretary of the Treasury Washington, D.C. 20220

Dear Mr. Secretary:

I am transmitting the Supplemental Report, Statistics of Income—1974, Small Area Data, Individual Income Tax Returns, prepared in partial fulfillment of the requirements of section 6108 of the Internal Revenue Code. This report contains statistics related to the operation of our tax system in local areas throughout the country.

Place of residence information provided by the taxpayer, which was included in the Internal Revenue Service's Master File of all individual income tax returns, was used as the means of classifying the data by States, counties and standard metropolitan statistical areas. Precautions were taken to prevent the possibility of identifying any individual taxpayers. In presenting the data, wherever information for fewer than 10 taxpayers appeared in any classification, it was combined with an adjacent size class.

Sincerely,

Commissioner

Department of the Treasury

Internal Revenue Service

- D. 1974 Tax Forms, 445

Introduction

This is the second Statistics of Income supplemental report in which individual income tax data by county are presented. The report presents information for the 3.142 countles and county equivalents In the United States and also for the 125 largest standard metropolitan statistical areas (SMSAs), as defined by the Office of Management and Budget for 1974. County of residence information entered on the 1974 return forms for purposes of the Revenue Sharing Program provided the basis for classification of returns by county. Explanations of the classifications and terms used in this report are provided in Appendix A.

As in the case of small area data published for 1972, the data shown in this report are based on the Internal Revenue Service's complete Individual Master File (IMF) rather than on the sample of returns used for the basic Statistics of Income. Individual Income Tax Returns.3 While the IMF contained individual income tax records of all individuals who filed a tax return for 1974, complete residence information was not provided by all taxpayers. In those cases where address information was unavailable or incomplete, special procedures (as described in Appendix B, Geographic Classifications) were followed to perfect the data.

The gross income tax return filing requirements applicable for 1974 were as follows:

- (a) a single person under 65 with gross income (defined as all income received in the form of money, property, and services, that was not, by law, expressly exempt from tax) of at least \$2,050,
- (b) a single person age 65 or older with gross income of at least \$2,800,
- (c) a married couple, neither of whom filed a separate return, with both spouses under 65 and with a combined gross income of at least \$2,800,
- (d) a married couple with one spouse age 65 or older and with a combined gross

income of at least \$3,550.

- (e) a married couple with both spouses age 65 or older and with a combined gross income of at least \$4,300.
- (f) a married person (regardless of age) whose spouse was filing a separate return (e.g., to obtain a refund of income tax withheld), if that married persoon has a gross income of \$750 or more.

In addition, returns were filed by:

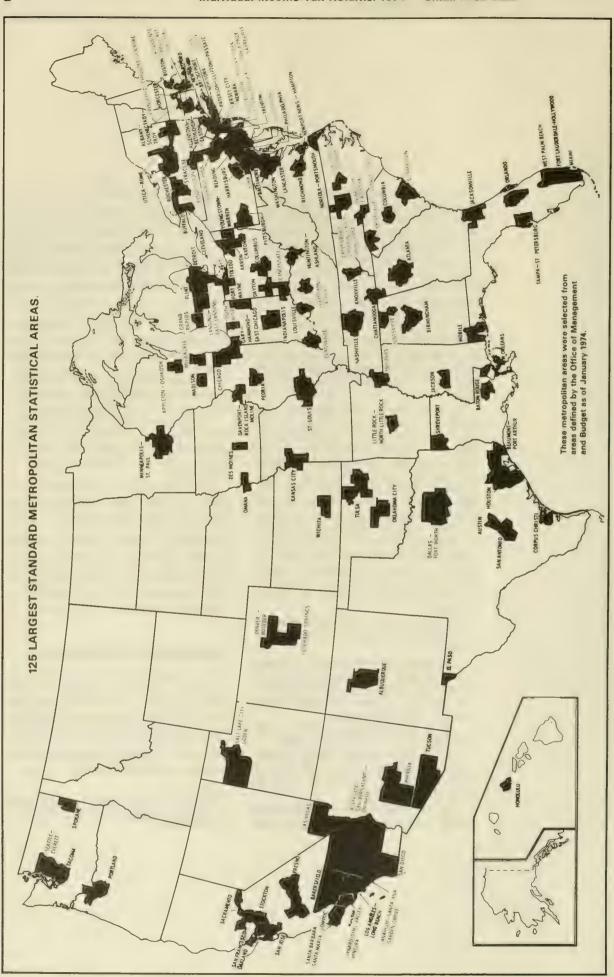

- (a) persons with gross income below the filing requirements who were entitled to a refund of income tax withheld from wages.
- (b) self-employed persons with "selfemployment income" of \$400 or more who were subject to the self-employment tax,
- (c) children claimed as dependents on their parent's tax returns who had gross income of \$750 or more and "unearned income," such as dividends, interest, or capital gains.

Differences will be noted between National and State data presented in this report and similar data published in Statistics of Income—1974, Individual Income Tax Returns. There are a number of reasons for these variations. They result primarily from the fact that the two reports were based on different files of returns. A complete explanation of these differences is provided in Appendix C of this report.

Organization of this Report

The tabular portion of this report includes a map and alphabetical listing of the 125 largest standard metropolitan statistical areas as of 1974. Data for the United States as a whole are shown on the page preceding the basic tables. Tables 1 and 2 show data for the 125 largest SMSAs and data for counties and States are shown in Table 3.

¹ Statistics of Income—1974, Individual Income Tax Returns is referred to throughout this text as the regular report.

Basic Tables

In the tables which follow, the full number of returns is shown, but amounts are shown in thousands of dollars. Asterisks have been used to avoid showing information for fewer than ten returns. An asterisk (*) indicates the frequency and corresponding amount for a specific data class have been combined with another adjusted gross

income class as shown in Table 3. A frequency but no corresponding amount implies that the amount is less than \$500. A dash(—) indicates a zero. See appendix A and B for "Explanation of Classifications and Terms" and "Sources and Limitations of the Data."

Explanation of Classifications and Terms

Classifications

Counties

In most States, counties were the primary Governmental subdivisions; but in Louisiana these divisions were known as parishes. The District of Columbia had no counties. There were also no counties in Alaska. In their place, data are shown for their statistical equivalents, designated "census divisions", the boundaries for which normally followed geographic lines. In addition to counties, Maryland, Missouri, Nevada, and Virginia also included certain cities which were independent of counties.

Size of adjusted gross income

The amount of adjusted gross income reported by the taxpayer on the return was the basis for classifying data by size. Returns with deficit (and returns on which income equalled loss) were included in the "Under \$5,000" income class. The adjusted gross deficit shown on these returns was netted against the adjusted gross income for this size class.

Standard Metropolitan Statistical Areas (SMSAs)

The definitions of standard metropolitan statistical areas were established by the Statistical Policy Division, Office of Management and Budget. Each standard metropolitan statistical area contained a city with at least 50,000 inhabitants (or an economically integrated community of at least 50,000, if it contained a city of at least 25,000). For all parts of the country except New England, the SMSA was defined to include the whole county in which the central city was located, as well as such adjacent whole counties as were determined to be metropolitan in character and economically and socially integrated with the county of the central city.

In New England, however, the city and town are considered to be administratively more important than the county, and they were used as the building blocks in defining SMSAs. An example of a New England SMSA was the Hartford, Connecticut SMSA. It consisted of the city of Hartford, 21 additional towns within Hartford County, one town in Litchfield County, three towns in Middlesex County, one town in New London County, and ten towns in Tolland County.

States

Tax payers were classified according to the State in which they lived, including the District of Columbia. Military service men and women who filed from Army Post Office and Fleet Post Office addresses, residents of Puerto Rico, U. S. citizens living abroad, and taxpayers with no address information were excluded from the tabulations.

Explanation of Terms

Adjusted gross income

This amount was the result of reducing gross income from all sources subject to tax by adjustments such as the following:

- (1) Ordinary and necessary expenses of operating a trade or business.
- (2) Employee business and moving expenses.
- (3) Expense deductions attributable to rents and royalties,
- (4) Expenses of outside salesman attributable to earning a salary, commission, or other compensation,
- (5) Depreciation and depletion allowed life tenants and income beneficiaries of property held in trust.
- (6) Exclusion of allowable sick pay if the sick pay was included in gross salary,
- (7) Deductible losses from sales of capital assets and other property.
- (8) Deductible half of the excess of net long-term capital gain over net shortterm capital loss,
- (9) Business "net operating loss" carryover,
- (10) Contributions to retirement funds by the self-employed, and
- (11) Exclusion of \$100 per taxpayer of eligible dividend income.

A deficit in adjusted gross income occurred when the allowable deductions or losses exceeded gross income. Negative amounts were subtracted from the total amount shown for adjusted gross income.

Dividends in adjusted gross income

Total domestic and foreign dividends less the dividend exclusion equalled dividends in adjusted gross income. Except on joint returns, a taxpayer could exclude up to \$100 of eligible dividends from adjusted gros income. On joint returns the maximum exclusion was \$200 if both husband and wife received eligible dividends, each excluding up to \$100 of his or her respective dividend income.

Taxpayers were instructed to exclude capital gain distributions from regulated investment companies and real estate Investment trusts; nontaxable distributions of stock or stock rights; returns of capital; or liquidation distributions; as well as so-called dividends on deposits or withdrawable accounts in mutual saving banks, cooperative banks, saving and loan associations, and credit unions.

Interest

Interest received was the taxable portion of interest received from bonds, debentures, notes, mortgages, personal loans, and bank deposits. So-called dividends from savings accounts were also included as interest received. Excluded was the interest on State or local Government obligations which was tax-exempt and therefore did not have to be reported on the tax return.

Number of dependent exemptions

Included in total exemptions are those allowed for qualified dependents who had less than \$750 gross income (\$750 or more if in the second category below) and who received more than half their support from the taxpayer. An exception to the support test for a dependent provided that where the individual was supported by several persons, none of whom contributed more than half of total support, any one of the group who had contributed more than 10 percent could claim the exemption if the others who contributed more than 10 percent agreed not to claim the exemption.

The total number of exemptions shown in this report includes some duplication. This occurred in the case of—

- (1) taxpayers who were claimed as dependents and had less than \$750 in gross income, but filed a return to obtain a refund of tax withheld on wages, and
- (2) dependents under 19 years of age or students who were either required to file a return because their gross income was \$2,050 or more, or because they had less than \$2,050 of gross income and filed a return only to obtain a refund of tax withheld on wages.

In each of these instances individuals

were counted twice, as taxpayers filing their own returns and as dependents on another taxpayer's return.

To qualify as a dependent, an individual must have been a citizen, resident or national of the United States; a resident of Canada, Mexico, Panama, or the Panama Canal Zone, for some part of the year; or an alien child adopted by and living with a U. S. citizen abroad.

An exemption could be claimed for a dependent who was born or who died during the year if the support and other tests were met for the part of the year during which the dependent was alive.

Number of exemptions

In the computation of taxable income, a \$750 deduction from adjusted gross income was allowed for each exemption. The figure appearing under this heading in the tables represents the total number of exemptions claimed.

An exemption was allowed for each taxpayer and each dependent shown on a return (on joint returns husband and wife were each regarded as a taxpayer). If either husband or wife filed a separate return, the other spouse's exemption could be claimed on that return only if he or she did not file a return, had no gross income, and was not the dependent of another taxpayer. Additional exemptions were allowed for the taxpayer or spouse who indicated either or both of the following conditions: (1) age 65 or over, (2) blindness. Additional information on this subject is provided in Appendix C.

Number of joint returns

These were either returns on which married taxpayers reported their combined income or returns of married taxpayers where only one spouse had income, but exemptions for both were claimed. Generally, the filing of a joint return resulted in a tax saving because of "income splitting" which was automatically provided for in the joint return tax rate schedule.

Number of returns

Number of returns represented tax returns (Forms 1040 and 1040A) filed by individual income taxpayers, either separately or jointly (in the case of most married couples), during calendar year 1975. Most of the returns were for tax year 1974 and were filed by taxpayers with calendar-year accounting periods. A small number of prior-year delinquent and noncalendar year returns were also included, as explained in Appendix C. In the few instances where the same taxpayer filed more than one return during 1975, only the most recent return was counted, and only the data on that return were tabulated.

Salaries and wages

Gross salaries and wages as reported on the tax return were amounts of compensation for personal services prior to statutory adjustments (such as sick pay exclusion and certain expenses connected with employment). Also, the tax return instructions called for the inclusion of employer-paid commissions, bonuses, tips, fees, excess reimbursement over employee business expenses, and the value of nonmonetary payments for services, e.g., merchandise, accommodations, or property to the extent reported by the taxpayer as salaries and wages. However, excluded were portions of salaries and wages earned abroad which were tax-exempt under special provisions of the law.

Total tax

Total tax was the taxpayer's liability representing the sum of income tax after credits, additional tax for tax preferences ("minimum tax"), self-employment tax due under the social security law, tax from recomputing prior-year investment and work incentive (WIN) credits, and social security taxes on tip income.

As the name "income tax after credits" implies, this amount was net of the retirement income credit, the investment credit, the foreign tax credit, the contributions to political candidates credit, and the work incentive program (WIN) credit.

Sources and Limitations of the Data

Sources of the Data

Data in this report were based on the Internal Revenue Service Individual Master File (IMF) for 1974 which contained records of the tax transactions of individual income taxpayers. Returns with military and foreign addresses and returns with no addresses were excluded from the tabulations.

A 1974 return was defined as a Form 1040 or Form 1040A posted to the IMF during calendar year 1975. Most of these returns covered income received during calendar year 1974. A small number of noncalendar-year and prior-year delinquent returns were included as well. The latter group may be thought of as a substitute for 1974 returns filed after 1975.

A relatively small number of taxpayers filed more than one return during calendar year 1975 (e.g., one current-year return plus a prior-year delinquent return). However, only the current-year return was used for the statistics.

Individuals who had tax withheld from wages, but whose income was less than that required for filing, usually filed to obtain a refund of tax withheld, so that by taking these exceptions into account about 205.3 million individuals were covered by the tax system in 1974, as compared to a total population estimated at 212 million by the Bureau of the Census.²

Limitations of the Data

Response and taxpayer reporting

The accuracy of the data was affected by any taxpayer reporting errors as well as any systemic errors introduced in processing the data even though efforts were made throughout the revenue processing system to eliminate such errors.

A preliminary check of the tax return data was performed by tax examiners prior to transcribing the return to computer tape. For instance, if the taxpayer forgot to enter on the return total wages shown on Form W-2, the tax examiner entered this figure onto the return.

After a return record was first transcribed and entered onto tape, but before it was posted to the Individual Master File (IMF), it was subjected to validity and mathematical vertification tests. The validity tests were a series of checks on the internal

consistency of the return records. As examples, if an amount was shown for refund, but none for withholding; if tax withholding was greater than total wages; or if the number of exemptions claimed was inconsistent with the marital status or number of taxpayer names shown—then the return record was considered invalid and was read out for comparison with the return and correction. If it could not be corrected, correspondence with the taxpayer was initiated. Once the discrepancy was resolved, the corrected data was entered onto the IMF.

Mathematical verification involved a recomputation of tax liability in order to verify balance due or refund requested on the basis of the income, marital status, deduction, and exemption data given by the taxpayer. If the recomputed tax liability differed from that indicated on the return record, the record was also read out for correction or for correspondence with the taxpayer. Corrections made by tax examiners during examination of the return or as a result of the validity or mathematical verification tests are reflected in the tabulations.

Geographic Classifications

The primary source of the geographic classifications in this report was the entry for county of residence given by each tax-payer. Whenever the taxpayer failed to complete the entry, a residence code developed by the Census Bureau and based on the individual address information was used.

Since SMSAs in the New England area were composed of Census "minor clvil divisions" (MCDs), the Census Bureau residence code was used to determine whether the taxpayer lived within a particular New England SMSA.

Relationship between number of individuals and number of individual income tax returns

Tax returns and the personal exemptions (excluding age and blindness) claimed on them covered about 97 percent of the U. S. population (see footnote 2 and Sources of the Data). Nevertheless, there are limitations in using the statistics as the basis for estimating the population of an area, i.e., by counting two taxpayers for each joint

return, one taxpayer each for all other types of returns, and adding the number of exemptions for dependents.

First, some married persons who did not receive any income during the tax year were not counted because their spouses elected to file separate instead of joint returns.³ By law, the non-filing spouse could only be claimed as a taxpayer exemption on the separate return and so is omitted from the computation described above. As a result, in the IRS estimate of the population given in footnote 2, only one taxpayer exemption was counted for each married person filing a separate return.

Second, there were also factors introduced in revenue processing which had the effect of understating the population. A factor affecting the number of joint returns was that the Individual Master File used for this report would reflect any taxpayer or audit-initiated changes, and the sample used in the regular report would not. A less significant factor affecting the number of dependent exemptions was that the Master File system, in order to facilitate processing, generally recognized a maximum of nine exemptions for each type of dependent claimed per tax return (although under certain conditions up to 18 could be counted).

Third, there was the tax law itself. Many individuals did not have to file income tax returns for themselves and their families because they did not meet the income requirements for filing a tax return and may not have filed a return to obtain a refund of income tax withheld (see Introduction).

There was one countering factor, how-

² The IRS estimate (about 205.3 million) is obtained by counting two taxpayers for each joint return, one taxpayer each for all other types of returns, and adding the number of dependents' exemptions. The total "number of exemptions" (about 215.1 million) shown in this report also includes exemptions for age and blindness; the excess of exemptions over 205.3 million represents the approximate number of age and blindness exemptions. Other limitations in comparing tax return counts with the U.S. population are discussed later in this Appendix. The Census figure included armed forces stationed abroad. The Census estimate, it should be noted, was for July 1, 1974, while IRS exemptions include persons who were alive at any time during the taxable year.

³ According to Statistics of Income—1974, Individual Income Tax Returns, there were an estimated 179,478 returns classified in the category, married persons filling separately, where one spouse claimed both taxpayer exemptions.

ever. The tax filing population was overstated because some dependents who earned small amounts of income were counted twice in the tax filing population: once as a taxpayer submitting a return, and once as dependent on the parent's or guardian's return (see Appendix A, Number of dependent exemptions).

Differences in Data Between this Report and Statistics of Income--1974, Individual Income Tax Returns

Detailed statistics from Individual Income tax returns are published annually in Statistics of Income, Individual Income Tax Returns. For 1974, this report was based on a specially selected sample of roughly 190,000 edited returns. A description of the sample and of the systemic limitations of the data for the regular Statistics of Income is shown in section 7 of the 1974 report.

The Statistics of Income sample was designed primarily to produce national and State estimates. Therefore, in producing this supplemental report on local area data, the Internal Revenue Service Master File of all individual income tax returns had to be used. Since the data in the two reports were based on two different files of returns, the national and State totals shown in this report are not identical with those in the regular Statistics of Income report for 1974. This difference in coverage is described below.

In addition, the data in this report, based on the Master File, reflect the coverage, definitions, processing procedures, and classifications established for revenue processing which were not necessarily the same as those used in statistical processing. The limitations of data from the Master File are explained in Appendix B to this report. The most important differences between the two types of processing systems are as follows:

Coverage

Both the regular report for 1974 and this supplemental report were based on individual income tax returns filed during 1975. However, there were small differences in the handling of certain special types of returns.

Prior year delinquent returns

In the annual Statistics of Income, these returns were accepted as representing a reasonable estimate of delinquent returns that would eventually be filed for 1974. If the same taxpayer filed two returns during the year, i.e., a current-year return and a prior-year delinquent return, both had a certain probability of being selected for the sample.

In this report, prior-year returns were also included in the tabulations. However,

if the same taxpayer filed both a prior-year and a current-year return during 1975, only the current-year return was used.

Returns with no information on income and tax

In the regular report, these returns were included in the statistical sample, but were excluded from the tabulations. Such returns were both included and tabulated for this supplemental report.

Definitions

Three of the items shown in this report are defined somewhat differently from similar items in the regular report.

Number of exemptions

In this report, number of exemptions include the personal exemptions for the tax-payer (taxpayer and spouse on joint returns) as well as additional exemptions allowed for age and blindness. In the regular report, age and blindness exemptions were shown separately from personal exemptions.

Total tax

In addition to "income tax after credits," total tax as shown in this report also includes additional tax for tax preferences ("minimum tax"), self-employment tax, tax from recomputing prior-year investment and work incentive (WIN) credits, and social security tax on tip income. "Income tax after credits," the measure of tax used in most tables in the regular report, does not include these amounts, although they are presented separately in some of the tables.

In Table C-1 of this appendix, the number of exemptions and the amounts of income and tax shown for the regular report have been adjusted for comparison purposes to conform to the definitions used in the supplemental report (see Footnotes, Table C-1).

Salaries and wages

In Master File processing, no attempt was made to "edit" salaries and wages if they were reported elsewhere on the return because the editing did not affect the amount of tax due. In the regular report, items reported in "miscellaneous income" belonging in wages and salaries, such as fees, commissions, bonuses, merchandise, meals and living quarters in lieu of wages, and other items were transferred whenever possible during statistical editing unless they were connected with self-employment.

Processing Methods

Even for items which were defined the same way for both reports, differences occurred because of procedures used for handling certain tax items on the return. Such differences occurred in the case of the number of dependent exemptions.

For Master File revenue processing, a maximum of nine dependent exemptions was recorded for each category of persons living with the taxpayer (i.e., children living at home, children living away, parents with same address, parents with different addresses, and other dependents), although deductions were allowed for all eligible exemptions. For the regular Statistics of Income, an exact count was recorded for those returns sampled. As a result, there is a difference in dependent exemptions shown in this report as compared to the regular report for 1974 (see Table C-1).

Another procedural difference was that for the regular report, a sample of unrevised returns was used while the returns on the Individual Master File used in this report reflect any corrections made during revenue processing or any taxpayer or IRS-initiated changes made prior to August 1976, when the computer tape file used for this report was created.

All other items in Table C-1 differ slightly in the National totals with similar differences appearing in individual income classes. As indicated earlier in this Appendix, differences of this magnitude can be ascribed to sampling variability to which the regular data are subject. Also, controls maintained over the selection of the sampled returns for the regular report and processing of the same data under both systems did not completely eliminate the possibility of error. In addition, practical operating considerations necessitated allowances of tolerances in processing data.

State, County, and SMSA Classifications

State classifications in the regular Statistics of Income report for 1974 were based on the taxpayer's mailing address shown on the preprinted address label or by the taxpayer on the return. In the supplemental report, SMSA, State, and county classifications were based on the taxpayer's entry for county of residence. Only in cases where no entry was given by the taxpaver for county of residence or the indicated county was one which was partially included in one of the New England SMSAs shown in this report was the taxpayer's mailing address used.

¹ Data in the supplemental report were based on the IRS Master File of individual returns. Data in the regular report were based on a specially selected sample of edited returns.

² Includes exemptions for age, blindness, and dependents.

³ Includes income tax after credits, additional tax for tax preferences, tax from recomputed prior-year investment credit, tax from recomputed prior-year WIN credit, and social security tax on tip income.

NOTE: Detail may not add to total because of rounding. The regular report referred to in this table is Statistics of Income—1974, Individual Income Tax Returns.

¹ Data in the supplemental report were based on the IRS Master File of individual returns. Data in the regular report were based on a specially selected sample of edited returns.

² Includes exemptions for age, blindness, and dependents.

³ For the regular report, includes U. S. citizens abroad, Puerto Rico, and returns with APO or FPO addresses. For the supplemental report, also includes returns not elsewhere classifiable.

NOTE: Detail may not add to total because of rounding. The regular report referred to in this table is Statistics of Income—1974, Individual Income Tax Returns.

1974 Tax Forms

In the following facsimiles of the individual income tax returns the items used in this report have been checked.

Filin 1	spouse's social security number in designated space above and enter full name here Unmarried Head of Household (See instructions on page 5) Widow(er) with dependent child (Year spouse died 19) Widow(er) with dependent child (Year spouse died 19) Obeyou wish to designate \$1 of your taxes for this full child (Year spouse)	Enter number
